Status Update on transition to EPICS at the ISIS Source

Monday, 7 April 2025 11:00 (20 minutes)

We report on the progress in transitioning the ISIS source from our current control system to a PVAccess based implementation of EPICS. On the frontend efforts continue to improve automatically converted HMIs, and to improve usage of Phoebus services such as Save-and-Restore. We report on our progress in deploying and using our first conventional EPICS IOCs, and on the problems encountered in this area.
