

## web-pvtools - PV client tools for web

*Tuesday, 8 April 2025 13:55 (20 minutes)*

web-pvtools includes a series of PV client tools that can access IOCs via web browsers. This work is inspired by epics2web and pvws, and it supports both Channel Access and PV Access. It consists of a backend and a frontend, the backend is a customized version of pvws, whereas the frontend is a single page application based on Vue.js framework and provides PV tools like caget, caput, camonitor, cainfo, probe, StripTool and X/Y Plot. This talk will cover the implementation and usage of web-pvtools.

**Primary author:** WANG, Lin (IHEP/CSNS)

**Presenter:** WANG, Lin (IHEP/CSNS)
