Physics Without Frontiers - Helping to build the next generation of scientists worldwide

Kate Shaw (Sussex)

12 Nov 2025, 11:30

R61 CR03 (RAL)

Physics Without Frontiers is the flagship international outreach programme of the International Centre for Theoretical Physics (ICTP), built through a network of volunteer scientists who are PhD students, researchers, and professors working to help build the next generation of scientists in the Global South, often in their home country. Working with universities without strong research teams, the programme aims to bring training in all areas of physics and mathematics to students who might otherwise lack exposure, and mentor them to further study whether in academia or industry. This talk will present the impact and successes of the programme.
