

AIMS OF THE WORKSHOP:

1. Gather input from the community to draft the UK roadmap to detector R&D following ECFA symposia consultation phase.
2. Highlight common interests between groups and with industry.
3. Gather visions for R&D structure in the next years.

Sample of questions for discussion:

- What are the key technical challenges for the UK in each R&D area?
- What are the organisational / logistical barriers for us?
- How much is all this going to cost? Is it justified?
 - What is the likely UK participation in future projects?
 - What is the length, breadth and scale of R&D activities leading to them?
 - Are there commonalities we can exploit?
 - What demonstrator / exemplar projects should we target, and when?
- How do we ensure and maintain efficiency?
 - Commonalities between projects
 - Reduction of internal design competition
- What happens if we do nothing?
- What is the relationship with industry and other research areas?
- How do we convince people to act on this?
- How do we sustain a community?
