Discussions

Shinji Machida
UKRI/STFC Rutherford Appleton Laboratory

30 September 2022

Invited talks

- Muon collider
- FLASH radiotherapy
- CEBAF overview
- The future of neutron sources
- Superconducting magnets

Hardware

- Magnet for scaling, nonscaling
 - omni magnet
- CCT, superconducting
- Diagnostics
 - Priority
- RF (muon)
 - Frequency and aperture

Optics

- Linear nonscaling
 - CEBAF based on CBETA success
 - Muon acceleration, different optimisation
- Nonscaling with fixed tune
 - Small orbit excursion, less magnet field strength
- Scaling
 - Kyoto, Kyushu, FETS-FFA (ISIS-II)
- vFFA
- ICZC
- Hybrid: synchrotron and FFA, cyclotron and FFA

Applications

- Muon production
- SC gantry
- Medical (FLASH)
- Isotope production
- Neutron by ERIT
- High intensity FFA
- SHE

Beam dynamics

- Orbit determines fields
- Dynamic aperture
 - Race track vs high periodicity
- Decoupling
- Decomposition of multipoles
- RF phase slip, adiabaticity

Invited talks

- Muon collider
- FLASH radiotherapy
- CEBAF overview
- The future of neutron sources
- Superconducting magnets

Hardware

- Magnet for scaling, nonscaling
 - omni magnet
- CCT, superconducting
- Diagnostics
 - Priority
- RF (muon)
 - Frequency and aperture

Optics

- Linear nonscaling
 - CEBAF based on CBETA success
 - Muon acceleration, different optimisation
- Nonscaling with fixed tune
 - Small orbit excursion, less magnet field strength
- Scaling
 - Kyoto, Kyushu, FETS-FFA (ISIS-II)
- vFFA
- ICZC
- Hybrid: synchrotron and FFA, cyclotron and FFA

Applications

- Muon production
- SC gantry
- Medical (FLASH)
- Isotope production
- Neutron by ERIT
- **High intensity FFA**

Beam dynamics

- Orbit determines fields
- Dynamic aperture
 - **Race track vs high periodicity**
- Decoupling
- **Decomposition of multipoles**
- RF phase slip, adiabaticity
