

# Silicon Sensor Characterisation for the LHCb Mighty Tracker Upgrade

---

A summer placement project by Liz Arnold

# Me

- Physics at Durham University
- About to go into my 4<sup>th</sup> year of my integrated Masters in Physics
- Knowledge background in condensed matter and semiconductors
- Experience background in detector and experimental physics
- Looking into doing an experimental PhD afterwards

# Aims

- **determine pre-saturation injection range of each sensor**
- **perform threshold scans to demonstrate response across each chip**
- investigate the timing of the chips
- investigate the effects of temperature on the bias voltage and determine the break-down voltage point

# Mighty Tracker Upgrade

- LHCb – looking for beauty particles
- Increasing luminosity = higher radiation
- Mighty Tracker Upgrade
  - area of scintillating fibers closest to the beam line being replaced by silicon sensors (initially the pink area, then extending to the blue area)
  - silicon sensors are more radiation-tolerant

HV power supply

Power supplies

Oscilloscope

Mounted chip

Insulated box for cooling

# Data Analysis

Spent a lot of time working on my code

Have produced a highly adaptable data analysis tool with lots of descriptions and comments

Can be applied to future data acquisition tools and other sensors easily

The screenshot shows an IDE window titled "MTAnalysis - thrScan\_statPix\_morePix\_hist.py (on mercury003.pp.rl.ac.uk)". The left sidebar displays a project tree for "MTAnalysis [mighty-tracker-lab-analysis]". The main editor shows a Python script with the following content:

```

# Ampout Scan

Pre-saturation range  
0.3V - 0.6V

# Threshold Scan

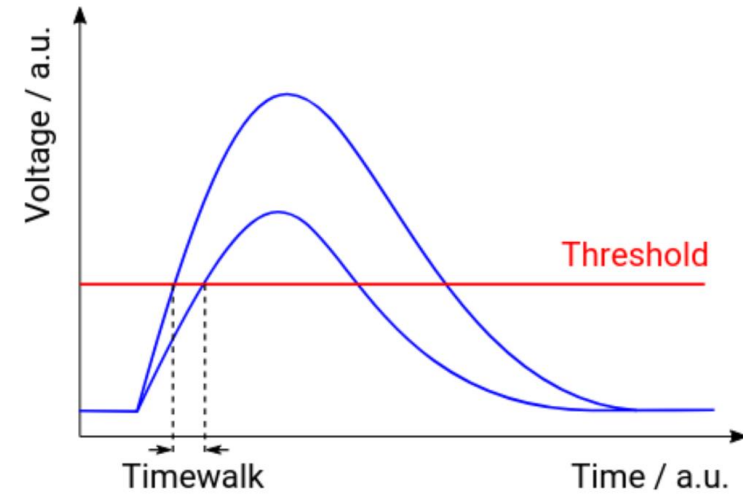

Figure 5.38: Illustration of timewalk

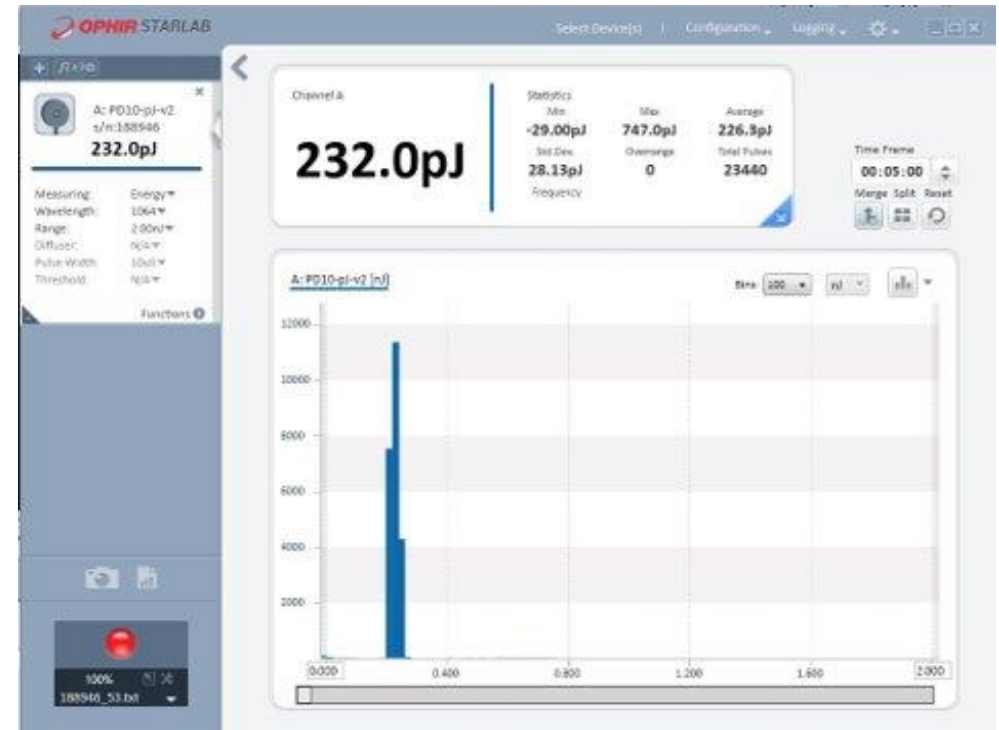

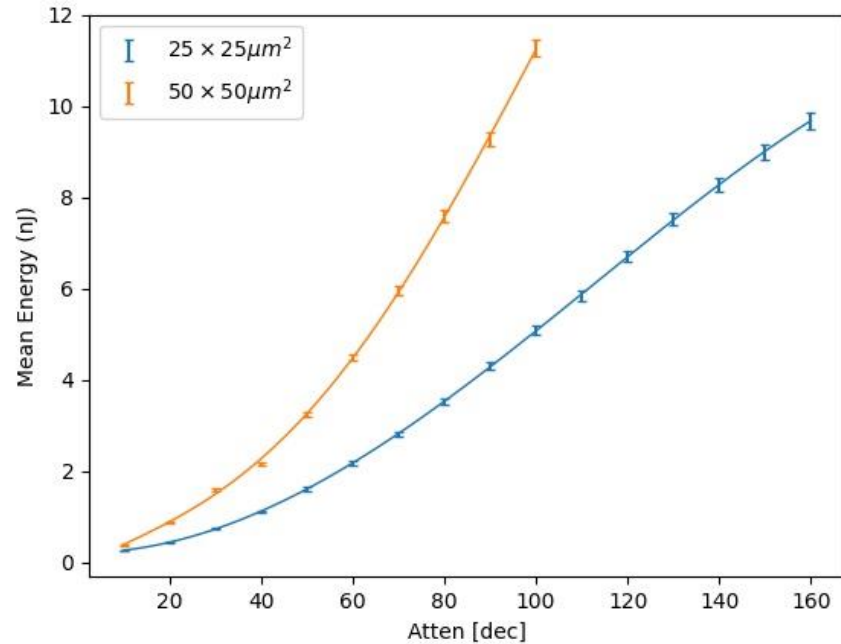

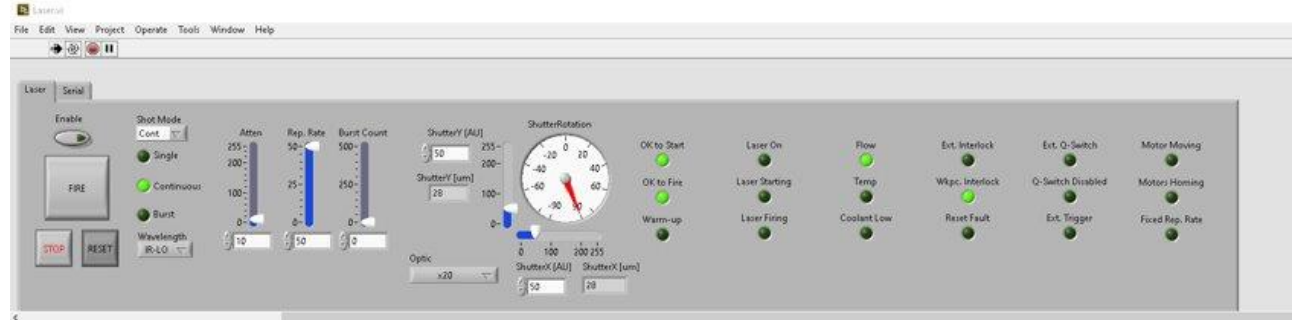

# 10% of the Chip

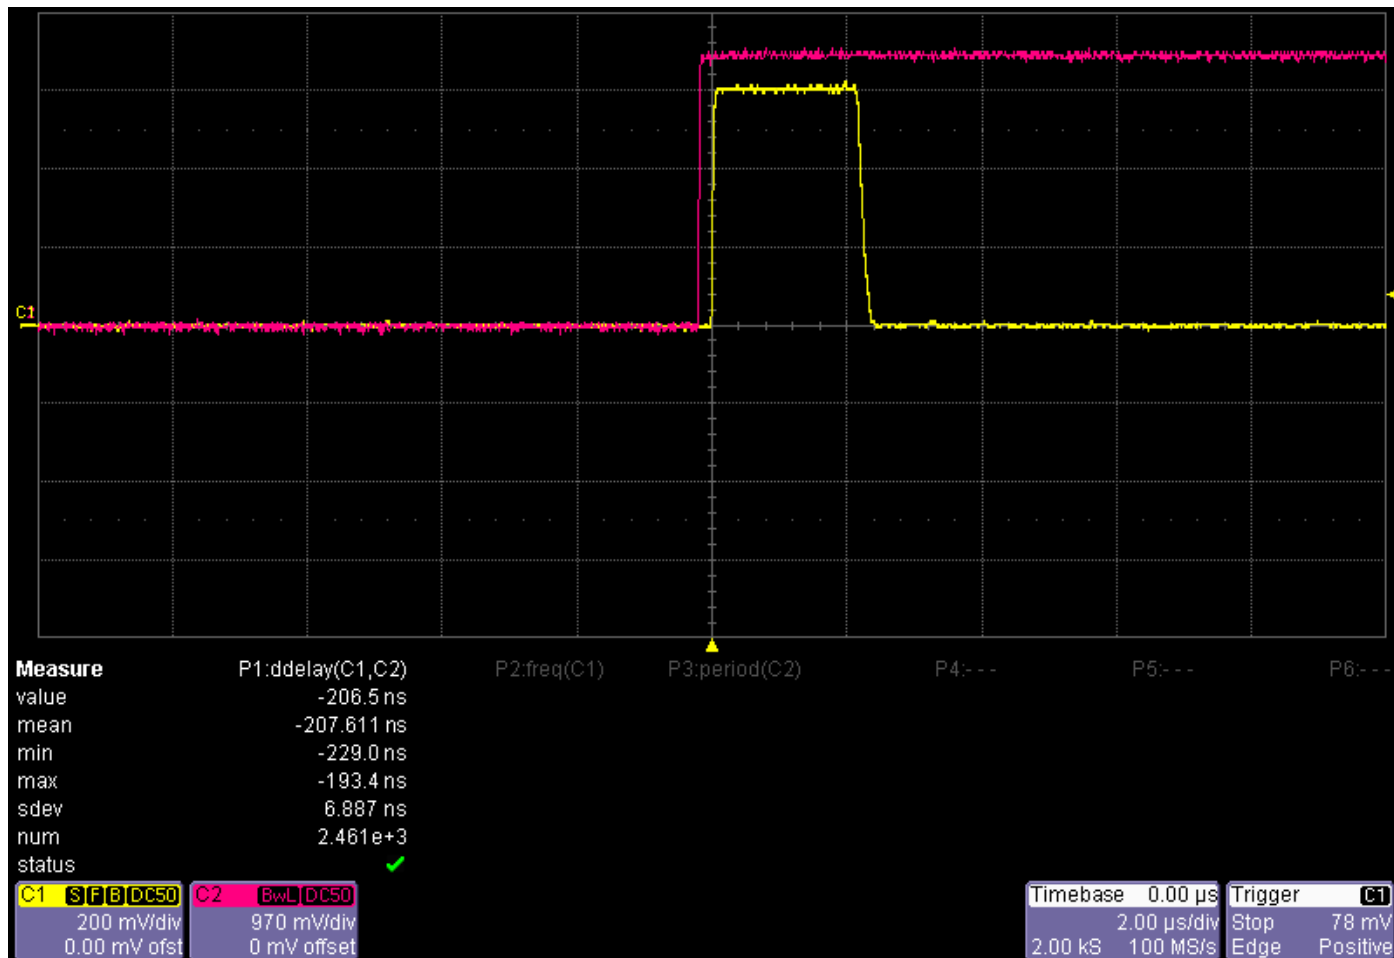

# Laser

# Calibrating the Laser

## Laser measurements

- Interested in the standard deviation of the time difference between the laser firing and hit being received on sensor
- perform over a range of pixels, shutter sizes, and energies

# 3 More Weeks

Laser stimulation

Temperature dependence

New MightyTracker DAQ

Run2021

# What I've gained

Linux experience

Command-line based working

Electronics experience

Step up my python

# What's next?

Return to my 4th (and final) year of my master's degree

Return to RAL as a Diamond user  
for my masters project

*X-ray absorption study of a quasi-two-  
dimensional cobalt oxide  $Sr_3Co_2O_7$*

Apply for PhDs – would love to return to STFC
