Vania Lay, Yu Hu, Ben Cox, Ben Smart, Colin Whyte, Kenneth
Long, Emma Harris, Jeff Bamber*

WP4: Ion-acoustic dose mapping

2 Years

- Validated models for the simulation of dose and ion-acoustic signals

- Experimental testing/evaluation of initial components for ion-acoustic and scintillation systems.

5 years

- Ion-acoustic system for dose mapping on a pulse-by-pulse basis
- Smart phantom system for cross-calibration of dose/range estimation

- Validated models for the simulation of dose and ion-acoustic signals for LhARA
- Results from initial biology experiments

2-year Objectives, Tasks, Milestones

Objectives:

- The development of a Geant4 MC simulation of the forward model
- The development of a k-wave acoustic forward model

Tasks:

- The detailed design of a proof of principle experiment to be executed during the Preconstruction Phase of the project, identifying potential suppliers for components.
- Reports on progress towards above objectives.

Milestones:

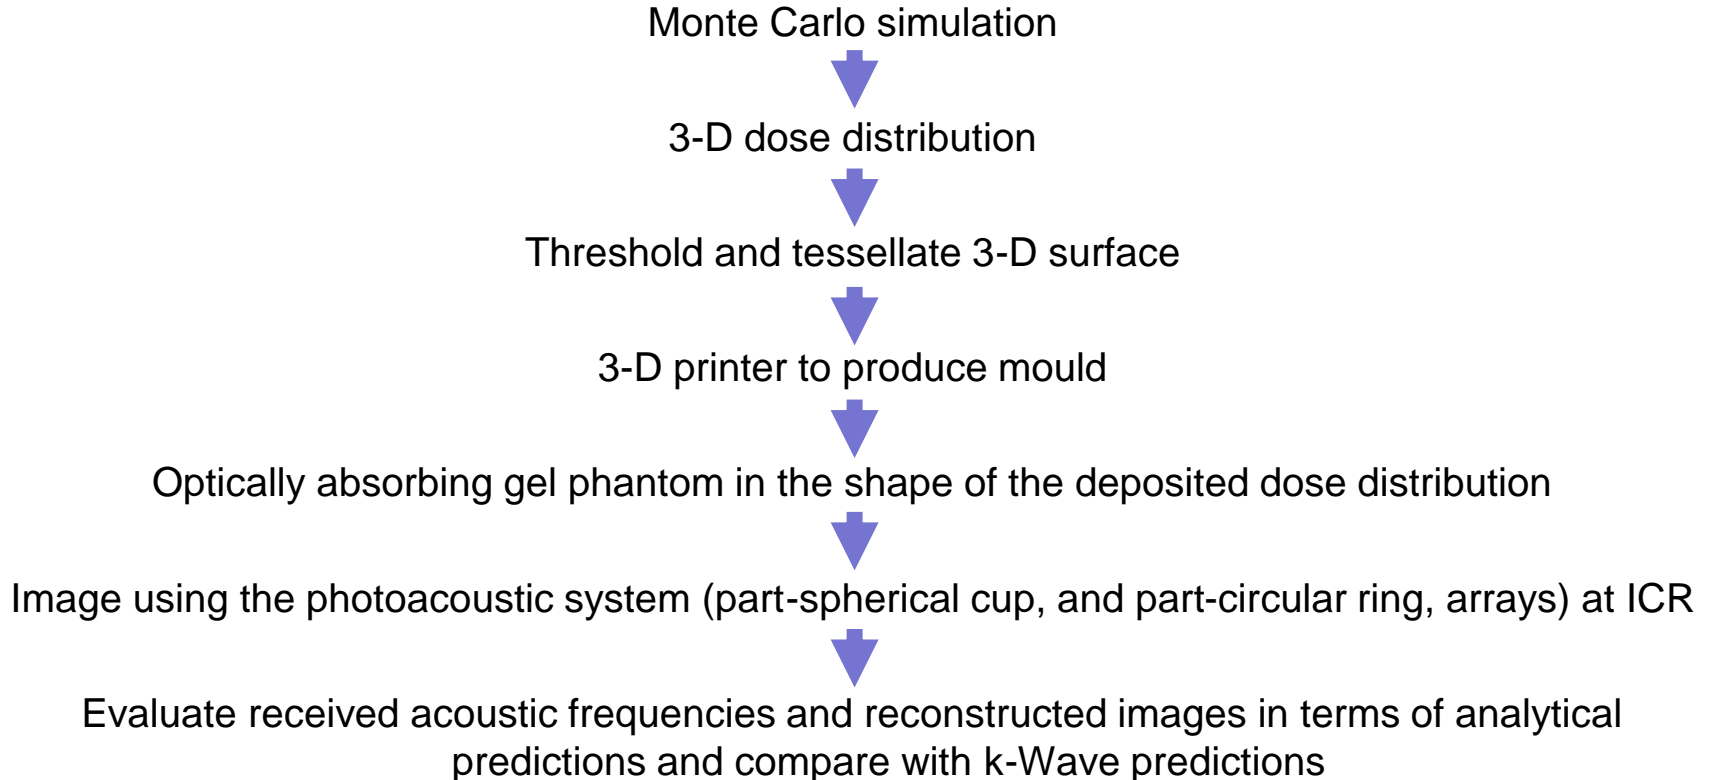

- 18-month report: forward simulation of energy deposited in a water phantom (SmartPhantom) and deposited energy resolved in 4D.
- 24-month report: results of forward simulation and its use to optimise SmartPhantom performance to provide the power density spectrum as input to the acoustic model.

Agenda

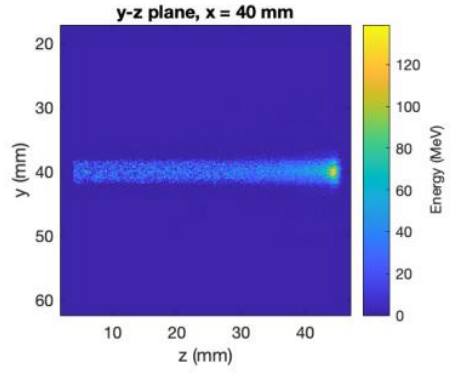

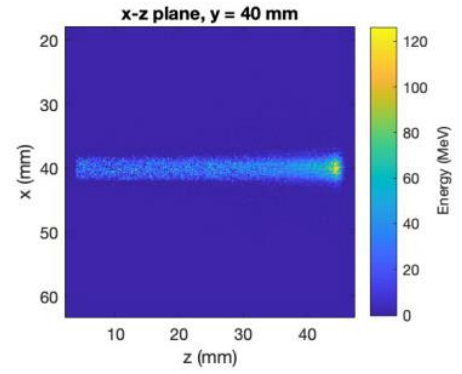

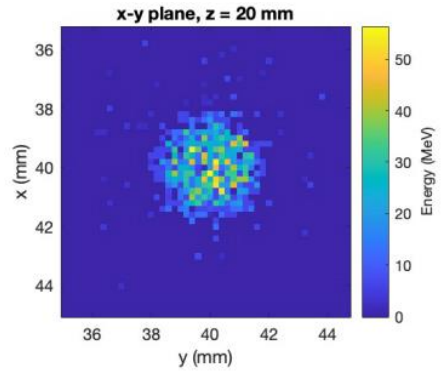

- ~~1. Jeff - Introduction, aims and objectives~~
- 2. Maria - Python → BDSIM → Geant4 → k-Wave simulation and plans for future validation experiment at LMU
3. Jeff - Photoacoustic simulation experiment (work of MRes student, Yu Hu)
4. Jeff – Summing up of status

Preliminary photoacoustic “experimental simulation”

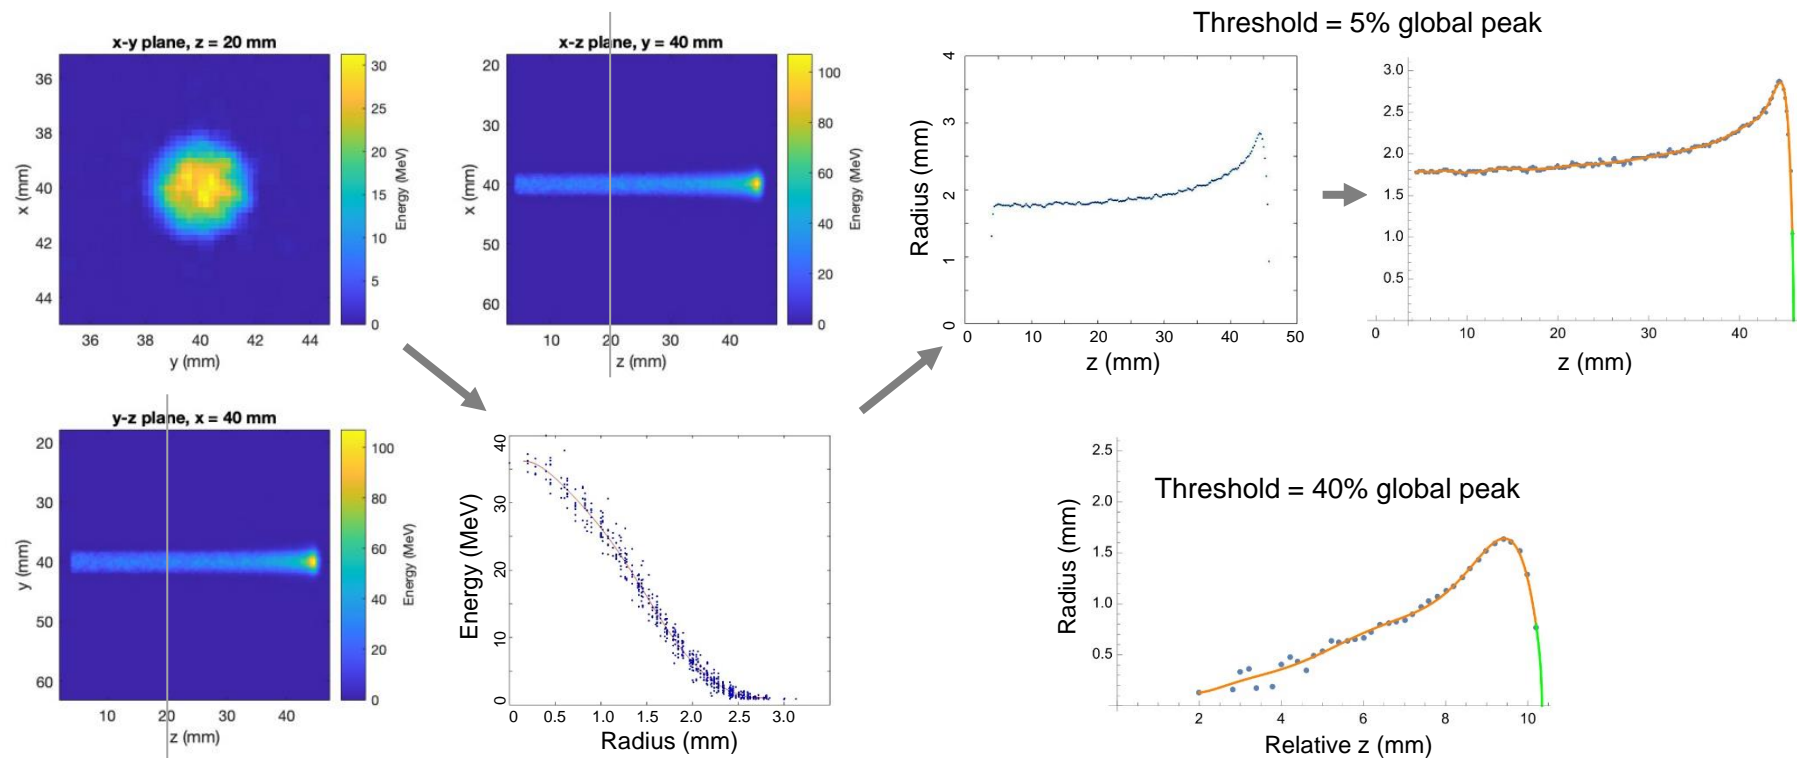

– Yu Hu (MRes project)

Geant4 – 20000 protons, 40 ns, 70 MeV

Further processing of deposited energy distribution

Mould designs for beam insert and background impression, from surface of revolution from radius-depth plots

Two halves of beam insert

Mould to create a hollow impression in the background

3D printed mould examples (5%)

Two halves of beam insert

Half the beam hollow impression in
half the cylindrical background

Half phantom example (40%)

Background
(TiO_2 in
gelatine)

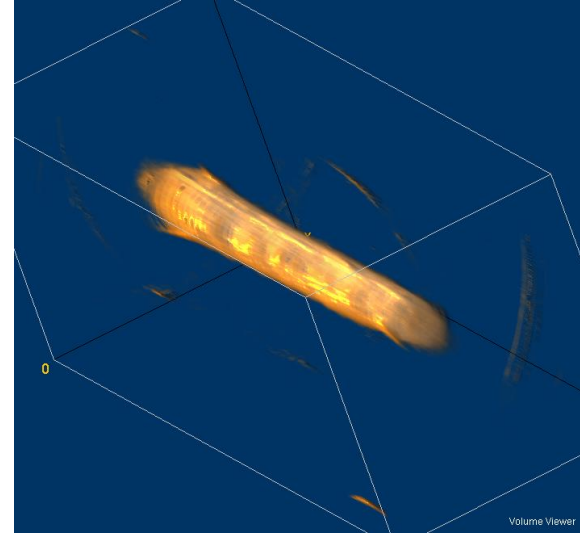

Beam insert
at 40%
threshold
(India ink
pigmented)

Photoacoustic imaging system

Example photoacoustic images (5%)

Acoustic signals received at sensor element 128

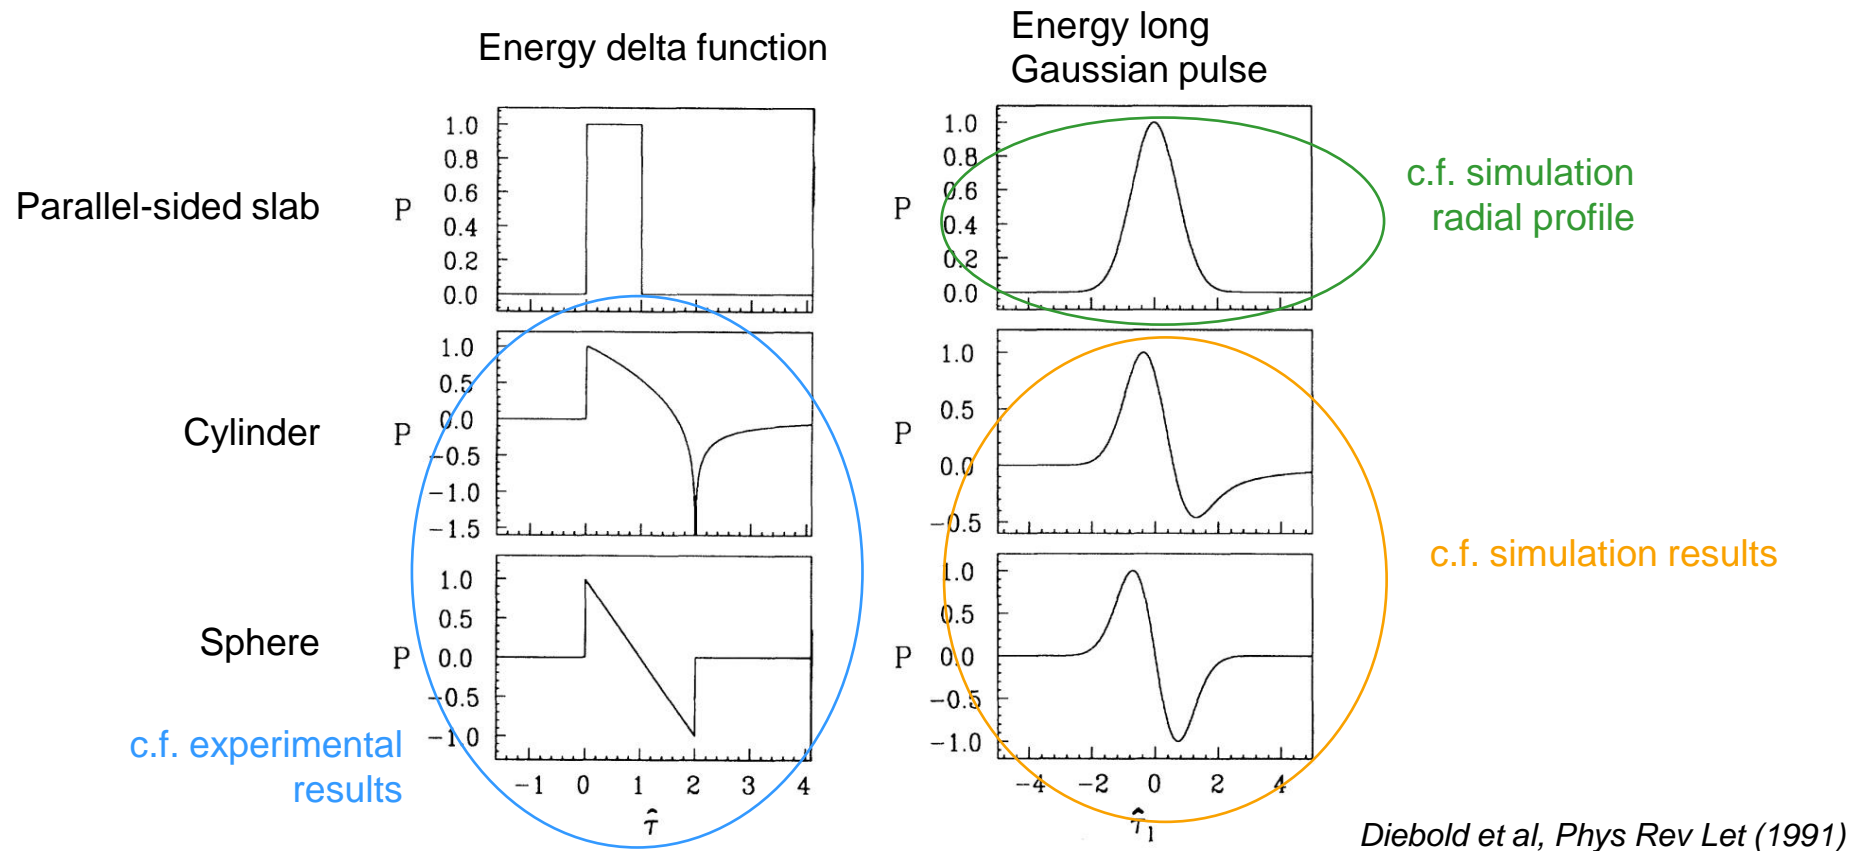

Acoustic signals received at sensor element 128

Simulated acoustic signals received at sensor element 128

Analytical (and experimentally confirmed) predictions of pressure-time waveforms

WP4 Ion-acoustic	WP4	Sat 01/10/22	Thu 30/09/27																																				
PA1 yrs 1&2	WP4	Sat 01/10/22	Mon 29/09/25																																				
1. Review - Current state of the art: ionacoustics / modelling of ionacoustics / proton dosimetry	WP4	Sat 01/10/22	Fri 30/12/22																																				
2. Development of GEANT 4 Monte Carlo part of the forward model	WP4	Sat 01/10/22	Mon 29/09/25																																				
2.1.Simulation of current beam line and smart phantom	WP4	Sat 01/10/22	Sat 01/04/23																																				
2.2.Updated simulation of LhARA and smart phantom, as the specifications are developed in WPs 2,3,5 and 6.	WP4	Sun 01/10/23	Sun 29/09/24																																				
3. Development of k-Wave forward acoustic model	WP4	Sun 01/01/23	Fri 27/12/24																																				
3.1.Simulation of ionacoustic source, propagation and sensing, and design of array configuration for validation experiments	WP4	Sun 01/01/23	Thu 28/09/23																																				
3.2.Updated simulation of ionacoustic source, and development of sensor array specification as Lhara specifications are developed	WP4	Sun 01/10/23	Fri 27/12/24																																				
4. Implementation, simulation evaluation and development of inverse dose-map reconstruction software	WP4	Sat 01/04/23	Wed 02/07/25																																				
4.1. Direct ionacoustic reconstruction with handling of sensor array c	WP4	Sat 01/04/23	Thu 28/12/23																																				
4.2. Iterative reconstruction methods with model-based priors from	WP4	Tue 02/04/24	Tue 02/07/24																																				
4.3. Iterative reconstruction methods with angular dependence of frequency content from 2 and 3	WP4	Wed 02/10/24	Mon 30/12/24																																				
4.4. Implementation of various dose-map reconstruction programs o	WP4	Wed 03/04/24	Wed 02/07/25
